

SIRINAPHA DUBE

Summary

I am passionate about web development and I enjoy learning new skills and technologies. For the last 6 months I have been in an intensive bootcamp where I had to get up to speed on new languages, technologies, and frameworks and where I have put them in practice to create full stack projects. I'm looking to join a team where I can apply what I have learned as a full stack developer and to continue developing my skills. I am resourceful, hard working, curious, persistent, and responsible.

Projects

Pet Best Hotels

petbesthotels.com is a booking web site for pet hotels. It allows a user to search, compare prices, and book reservations for pet hotels. It allows a user to register for an account, search for hotels based on location, and book and manage reservations.

Technologies:

AngularJS, Bootstrap, NodeJS, Express, and PostgreSQL

Traditional Food Memory Game

A memory game where the player matches a country flag with the traditional food of that country. The focus was on using Javascript and to create a single page application with multiple views.

Technologies:

HTML, CSS, JavaScript, JQuery

FaveFlix

A website to keep track of your favorite movies using tmdb API with Facebook authentication. The focus of the project was to use commercial APIs and use external authentication technologies.

Technologies:

HTML, CSS, JavaScript, NodeJS, ExpressJS, EJS, PostgreSQL, Knex, OAuth

EventFinder

EventFinder is an event locator for any and all events based on various search queries using EventFul API, Facebook API. The focus of this project was to do full stack development by integrating AngularJS and NodeJS.

Technologies:

HTML, CSS, JavaScript, AngularJS, NodeJS, ExpressJS, PostgreSQL, Knex, OAuth.
